Summary

AI-focused B.Tech student in Computer Science (Data Science) with strong foundations in Machine Learning, Deep Learning, and Natural Language Processing. Experienced in building intelligent applications using Retrieval-Augmented Generation (RAG), NLP pipelines, and data-driven approaches. Passionate about applying AI to solve real-world problems.

Education

B.Tech in Computer Science (Data Science) CGPA: 8.2

Kolhapur Institute of Technology

Class XII (Maharashtra Board, 2023)	71.5%
-------------------------------------	-------

Class X (Maharashtra Board, 2021) 92.2%

Certifications

- 100 Days of Code: Complete Python Pro Bootcamp
- Complete Data Science, Machine Learning, Deep Learning NLP Bootcamp

Skills

Programming: Python

Libraries/Frameworks: Pandas, NumPy, TensorFlow, NLTK, Streamlit, LangChain

Machine Learning: Supervised Learning, Unsupervised Learning, Model Evaluation, Feature Engineering

Deep Learning: Neural Networks, CNN, RNN, LSTM

NLP / AI: Tokenization, Embeddings, RAG, LLMs, Text Classification

Tools: MySQL, Power BI, GitHub, VS Code

Core CS: Data Structures, OOPs, Problem Solving

Soft Skills: Communication, Leadership, Teamwork

Internship

SaiKet Systems — Machine Learning Intern

(Oct 2025 – Nov 2025)

- Worked on a real-world hotel dataset containing inconsistent, noisy, and missing values, requiring extensive preprocessing.
- Performed data cleaning, transformation, and feature engineering to improve data quality and model performance.
- Built and optimized a Random Forest model achieving 90% accuracy for prediction tasks.
- Applied cross-validation and evaluation metrics such as accuracy, precision, and recall to ensure model reliability.
- Conducted exploratory data analysis (EDA) to identify patterns, trends, and key features influencing predictions.
- Collaborated with team members to refine model performance and discussed deployment feasibility for production use.

Projects

AI-Powered Student Feedback Analyzer

- Developed an NLP-based system to analyze multilingual student feedback from various sources.
- Implemented sentiment analysis, topic classification, and alert detection for identifying critical feedback.
- Used text preprocessing techniques including tokenization, stopwords removal, and vectorization for improved accuracy.

- Built an interactive dashboard to visualize insights, trends, and feedback distribution using data visualization tools.
- Enhanced model performance by experimenting with embeddings and fine-tuning classification approaches.

RAG-Based Document Q&A System

- Designed and developed a Retrieval-Augmented Generation (RAG) system for intelligent document querying.
- Utilized FAISS for efficient similarity search and retrieval of relevant document chunks.
- Integrated Google Gemini API to generate accurate and context-aware responses.
- Built a user-friendly Streamlit interface allowing users to upload PDFs and interact through natural language queries.
- Improved answer relevance through chunking strategies, embedding optimization, and prompt engineering techniques.
- Ensured scalability and performance optimization for handling larger document datasets.

Achievements

- Runner-up in Hackathon
- Kaggle dataset: 3500+ downloads
- 130+ LeetCode problems solved

Languages

English, Hindi, Marathi
