Education

B.Tech in Computer Science (Data Science)
CGPA: 8.2

Kolhapur Institute of Technology

Class XII
Percentage: 71.5%

Maharashtra Board (2023)

Class X
Percentage: 92.2%

Maharashtra Board (2021)

Certifications

- **100 Days of Code: Complete Python Pro Bootcamp** (Oct 2024 – Jan 2025)
- **Complete Data Science, Machine Learning, Deep Learning & NLP Bootcamp** (Jan 2026 – Mar 2026)

Summary

I am a B.Tech student with a strong interest in Machine Learning and software development. I enjoy learning and applying concepts of Object-Oriented Programming (OOP) and Data Structures & Algorithms (DSA) to build practical and efficient solutions. I like working on real-world problems, especially those involving data analysis and automation. I am continuously improving my skills in Python, machine learning, and development, and I aim to grow as a well-rounded engineer by building meaningful projects and learning from experience.

Skills

Programming: Python

Libraries: Pandas, Scikit-Learn, TensorFlow, NLTK, Streamlit

Concepts: Object Oriented Programming, Data Structures & Algorithms, Machine Learning, Deep Learning, Natural Language Processing

Tools: MySQL, Power BI, VS Code, GitHub

Other: Communication, Leadership, Presentation Skills

Internship

SaiKet Systems — Machine Learning Intern

(Oct 2025 – Nov 2025)

- Worked on a real-world hotel management dataset that contained inconsistent and unstructured data.
- Independently handled the complete data pipeline including data cleaning, preprocessing, feature engineering, and exploratory data analysis (EDA).
- Identified key business insights such as booking patterns, cancellation behavior, and seasonal trends using data visualization techniques.
- Built a Random Forest model and improved its performance through hyperparameter tuning and cross-validation.
- Achieved approximately 99% accuracy on unseen data, demonstrating strong model generalization.
- Gained hands-on experience in applying machine learning techniques to solve real business problems using Python and Scikit-Learn.

Projects

AI-Powered Student Feedback Analyzer

(Sept 2025 – Oct 2025)

- Developed an NLP-based system to process and analyze multilingual student feedback.
- Implemented text preprocessing, sentiment analysis, and topic classification to convert unstructured data into meaningful insights.
- Designed features to detect sensitive issues such as harassment and discrimination from feedback data.
- Built an interactive dashboard to visualize trends and generate reports for better decision-making.

- Achieved 92% classification accuracy using optimized machine learning models such as SVM and Random Forest.
- Secured Runner-Up position in Technovation Hackathon among 100+ teams.

Personal Finance Tracker

(Sept 2025 – Oct 2025)

- Built a smart expense tracking system that allows users to record transactions using natural language input.
- Developed an NLP pipeline to extract key information such as amount and category from user input.
- Integrated OCR functionality to extract data from receipt images and convert it into structured transaction records.
- Stored and managed data using SQLite and created an interactive dashboard for analysis.
- Generated visual reports including pie charts and bar graphs to help users understand spending patterns.
- Implemented a simple chatbot feature to answer queries like monthly expenses and top spending categories.

Achievements

- Runner-Up — Technovation 1.0 Hackathon.
- Published dataset on Kaggle (3500+ downloads, 14000+ views).
- Solved 130+ problems on LeetCode.
