Summary

AI-focused B.Tech student in Computer Science (Data Science) with strong foundations in Machine Learning, Deep Learning, and Natural Language Processing. Experienced in building intelligent applications using Retrieval-Augmented Generation (RAG), NLP pipelines, and data-driven approaches. Proficient in Python and modern machine learning tools to develop scalable solutions for real-world problems such as document understanding, feedback analysis, and automation. Highly motivated to apply AI in solving practical challenges and continuously enhance skills through hands-on projects and real-world implementations.

Education

B.Tech in Computer Science (Data Science)

Kolhapur Institute of Technology
CGPA: 8.2

Class XII Maharashtra Board (2023)

Percentage: 71.5%

Class X Maharashtra Board (2021)

Percentage: 92.2%

Certifications

- 100 Days of Code: Complete Python Pro Bootcamp (Oct 2024 – Jan 2025)
- Complete Data Science, Machine Learning, Deep Learning & NLP Bootcamp (Jan 2026 – Mar 2026)

Skills

Programming: Python

Libraries/Frameworks: Pandas, NumPy, TensorFlow, NLTK, Streamlit, LangChain

Core Skills: Machine Learning, Deep Learning, Natural Language Processing, Retrieval-Augmented Generation (RAG), Generative AI, Large Language Models (LLMs), Data Structures & Algorithms, Object-Oriented Programming

Tools: MySQL, Power BI, VS Code, GitHub

Other: Communication, Leadership, Presentation Skills

Internship

SaiKet Systems — Machine Learning Intern (Oct 2025 – Nov 2025)

- Worked on a real-world hotel management dataset with inconsistent and unstructured data.
- Performed data cleaning, preprocessing, feature engineering, and exploratory data analysis (EDA).
- Identified key insights such as booking patterns, cancellations, and seasonal trends using visualization.
- Built and optimized a Random Forest model using hyperparameter tuning and cross-validation.
- Achieved 99% accuracy on unseen data, demonstrating strong model performance.

Projects

AI-Powered Student Feedback Analyzer (Sept 2025 – Oct 2025)

- Developed an NLP-based system to process and analyze multilingual student feedback.
- Implemented text preprocessing, sentiment analysis, and topic classification to convert unstructured data into meaningful insights.

- Designed features to detect sensitive issues such as harassment and discrimination from feedback data.
- Built an interactive dashboard to visualize trends and generate reports for better decision-making.
- Achieved 92% classification accuracy using optimized machine learning models such as SVM and Random Forest.
- Secured Runner-Up position in Technovation Hackathon among 100+ teams.

StudyMate AI (RAG System) (Apr 2026 – Apr 2026)

- Built an AI-powered document Q&A system that allows users to upload multiple PDF files and interact using natural language queries.
- Implemented a Retrieval-Augmented Generation (RAG) pipeline using text chunking, embeddings, and vector similarity search.
- Integrated Google Gemini API to generate context-aware responses from documents.
- Developed a Streamlit web app with file upload, chat interface, and real-time responses.
- Used FAISS for efficient storage and retrieval of document embeddings.
- Enabled multi-document querying for study and research use cases.

Achievements

- Runner-Up — Technovation 1.0 Hackathon
- Published dataset on Kaggle (3500+ downloads, 14000+ views)
- Solved 130+ problems on LeetCode

Languages

English, Hindi, Marathi
